

Kodak i4000 Series Scanners

Built to stay busy

Flawless Information Capture for Big Jobs

Your busy mailroom, production department or service bureau needs the most productive, accurate, and reliable information capture on the market. The i4000 Series Scanners are the right fit for your most demanding jobs.

Designed to keep pace with how work is done today

The i4000 Series offers a host of features combined with our exceptional image quality to help you deliver high productivity.

Get crisp, clear images even with challenging originals, thanks to **Kodak Perfect Page** image processing. And Dual LED technology produces high OCR read rates for even better data extraction precision with no loss of scanning speed.

Dependable expertise to empower any business

Our exclusive paper feeding technology captures virtually any document in almost any condition for unbeatable reliability. The i4000 has four layers of document protection to safeguard your important documents.

- Length detection protects against papers getting overlapped and appearing as one long document
- Double document detection also ensures that only one document enters the scanner at a time, which is especially helpful when a small document sticks together with a larger document
- Intelligent document protection “listens” for a telltale crumpling sound and immediately stops the scanning process
- Metal detection prevents forgotten staples and paper clips from scratching the scanner glass

Flawless integration that saves time and money

The i4000 delivers business value by finding the fastest, most efficient ways to enhance your workflows. With multi-zone barcode recognition, the driver reads barcode values to extract metadata, enabling easy integration with line-of-business systems.

Combine the scanner with **Kodak Info Input Solution** web capture software and you can manage applications, job setups, and users, as well as capture and index all from a centralized capture location.

Effortless user experience

Kodak delivers intuitive interfaces, one-touch buttons scanning, and other ease-of-use features, for a simplified user experience.

Smart Touch technology uses one-touch for frequently used scan tasks such as scanning onboarding applications or accounts payable invoices. You can preprogram jobs to automatically scan hard copies and save them as searchable PDFs, enabling you to easily search for information in the future.

Adaptable solutions for your ever-changing workplace
